Systems for the application in commissioning and distribution centers

Automated and efficient handling of shipping documents - Our new redtagger product line is the ideal solution for the automation of the insertion process of documents into boxes and for the application of labels and further entailed processes.

The integration of our redtagger systems enables a flexible flow of goods as well as an enhancement in productivity through the automation of time consuming, manual activities. Through the compatibility with our APACHE systems, redtagger further enhances the amount of automation with outgoing goods many times over.

Features

- Automatic job start
- Receipt insertion in document pouch
- Insertion of invoices, return slips etc. into the shipping carton
- Labelling of all shipping goods for in- and outgoing goods

Advantages

- Easy maintenance through an optimized, easy to access design
- High profitability with a huge saving of time in environments such as just-in-time print-data handling
- Demand-oriented use of energy
- Low noise-emission
- High throughput due to automated job start
- Easy Interfacing through a uniform visualization
- Custom-built controls, tailored for specific purposes
- Software Interfaces all from a single source
